

Customer information concerning

Substances of Very High Concern in articles

Steel products are considered as articles under the European Regulation (EC) 1907/2006, concerning the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH).

Article 33 of the REACH Regulations oblige suppliers of articles containing Substances of Very High Concern (SVHC) in a concentration greater than 0.1% by weight to communicate this information to its customers.

British Steel monitors the SVHC Candidate list and updates customers and downstream users where relevant. It is the intention of REACH to stimulate communication on substances along the supply chain.

Steel articles produced by British Steel do not contain SVHC's above 0.1% by weight with the exception of freecutting leaded steel grades. Please refer to our REACH statement of freecutting leaded steel grades for further information.
